Furthermore, some developers do not offer their apps in the Google Play Store and require you to manually download the Android Package file (APK). Once the APK file is on your PC, transfer it to your phone to manually install the app using the app to install the Android application. Enter your Android's multiple USB charging cable in the USB port on the Android phone. Connect the other end of the USB charging cable into a standard USB port on the computer. Click "Start" and then click "Explorer Resources". Double-click on your Android phone from the Portable Devices section, and then click "SD card" to access the phone memory card. Drag and release APK files in any position on the SD card to move them. Click the "USB" icon in the notification area of Windows 7 and choose "Expel the Android device" before disconnecting the cable. If you can't see the USB icon, click the small arrow to the left of the notification area.
