

I'm not a robot

## Vex iq rapid relay build instructions

Vex Robotics provides building instructions for various robots utilizing the 1st generation Vex Iq Super Kit or 2nd generation Education and Competition Kits. The IQ Clawbot is an ideal starting point for newcomers to Vex Iq, teaching fundamental building techniques while introducing basic coding concepts with Vexcode Iq. Each season, Vex Robotics releases instructions for a HeroBot, designed to perform specific tasks in the current Vex Iq Robotics Competition game. These robots are not intended for World Championship wins but serve as an excellent foundation for new teams to build upon throughout the season. This year's HeroBot, Swish, is compatible with the 2nd generation IQ Competition Kit and can be downloaded from the Vex Robotics website. For users employing the 1st Generation Vex Iq Kit, it is recommended to explore previous year's HeroBots for guidance.
