I've been playing in some non-steam servers before but long time i haven't touched CS 1.6 . I loved using MPH Aimbot v22 which is working well with my 4554 version (tried it with bots), but when I connect to actual server the cheat doesn't work (nor the aimbot, wallhack or esp). I've heard servers are now using some AMX Anti-Wallhack and Anti-Aimbot plugins, is there a workaround around this? Bypass or something? darthmoon123 is offline 3rd February 2020, 02:07 PM #2 1337 H4x012 Quote: Originally Posted by darthmoon123 I've been playing in some non-steam servers before but long time i haven't touched CS 1.6 . I love leis 3 and mph 22, but of these, you can only use a Drawfov for crosshair with 1-2 fov and nospread for shooting with awp , helps a lot. You can also use hideweaponvents with leis 3. The good thing about these hacks is that they work with alias commands and you can do on / off for each option or use 2-3 options on a single button with scripts. The old hacks were the best, but unfortunately no one else is doing them. buckwild1 is online now 3rd February 2020, 04:17 PM #3 Quote: Originally Posted by darthmoon123 I've been playing in some non-steam servers before but long time i haven't touched CS 1.6 . The only way to bypass those plugins is owning the hack source code, then modifying specific status you can successfully create a new modified hack that bypass Anti Aim/ESP .
