results of injuries which have been improperly treated, such as a poor reduction of a fracture, or from paralysis of muscles due to nerve injuries which cause such conditions as drop wrist or drop foot.

NEW GROWTHS

New growths, neoplasms, or tumors, may be defined as "growths, non-inflammatory in character, arising from pre-exist-

FIG. 7.—HARE LIP IN AN INFANT.
(Courtesy of Dr. Edward D. Truesdell.)

ing tissue but independent of the normal rate or laws of growth of such tissue, subserving no physiological function." They may be classified as benign and malignant. *Benign growths*, as a rule, are localized; they may be excised without danger of recurring, and they do not spread to other parts of the organism and start new tumor formations. Examples of these are fibromas, lipomas, and cysts. They rarely endanger the life of the individual. *Malignant growths* are those which are not localized, which infil-
