## How do i contact uniden customer service

If you need assistance with your Uniden product, our dedicated customer support team is here to help. You can reach us through various channels, including phone and email. We have extensive knowledge bases and FAQs that may be able to answer your questions quickly. However, if you require technical support or warranty repairs, please contact our team via the provided phone numbers during business hours (Monday to Friday, 9am-5pm Eastern Australia time). You can also visit our website's customer service area to see if we can resolve your issue without needing to contact us. If you need in-person assistance with a faulty product, Uniden has authorized service centers located throughout Australia. These centers specialize in repairing and maintaining Uniden products, including phones, UHF radios, CB radios, scanners, and marine radios. Below is a list of locations by state: \* New South Wales: Chipping Norton, Bega, Broken Hill, Toowoomba \* Queensland: Maryborough, Bundaberg, Gladstone, Rockhampton, Emerald \* Victoria: Preston \* South Australia: Welland, Croydon, Mt Gambier \* Western Australia: East Perth, Malaga For more information or to locate a service center near you, please contact us at [phone number]. Uniden Product Troubleshooting Guide If you are experiencing issues with your Uniden radio, try these steps first: Make sure AC Adapter is plugged into telephone Base Unit and wall outlet. Ensure Handset is properly seated in Base Unit. Clean charging contacts on the Handset and Base Unit. Power adaptor connected to electrical power at all times. The batteries need an initial uninterrupted charge of 15-20 hours before use. Check that battery is connected properly. If problems persist, try these additional steps: Move Base Unit antenna fully extended and vertical. Change phone channel by pressing (chan) button on keypad if available. No other device sharing same AC power outlet as cordless phone. Remove metal objects from Base Unit area. Restore power to Base Unit after interruption during call. Disconnect AC adapter for a few minutes, reconnect and turn power on. Contact Uniden Customer Service if issues remain. To utilize this service, you must arrange it with your provider, such as Telstra or Optus. The call waiting signal can be answered by pressing 'Flash' and then '2', which will put the first caller on hold. To switch back, press 'Flash' and '1'. Ensure your phone is set to tone and the T/P switch is in the correct position. Verify with your provider that call waiting is activated and no other appliances share the same power outlet. Fully extend the antenna and check the REC TIME setting. Pressing the answer button allows up to 15 rings before the machine takes a message. If issues persist, reset the machine, clock, and ensure uninterrupted power. Memory may be full, so delete stored messages or reset and re-record your outgoing message. Storing a phone number involves pressing the Memory key, followed by the number and then the Memory key again. Volume can be adjusted during or between calls using the Volume button. In case of water damage, unplug and dry the unit before taking it for service.
