

I'm not a robot

A Senior ETL Developer develops, implements and maintains the functionality of the Enterprise Data Warehouse. They also work with members of Reporting, Application Support, DBA, Infrastructure and other teams to ensure the timeliness and reliability of information flowing between the Data Warehouse and other systems. Job Responsibilities • Implement data handling, cleansing, and standardization procedures and business transformation rules and logic (ETL) using Informatica 9.5 and Oracle 11g • Develop, and implement functions, stored procedures, and ETL jobs using PL/SQL • Actively participate in agile scrum review and planning sessions • Actively participate in regular code reviews and maintenance of code and process documentation Required Experience • Experience with Informatica DQ required • Experience with Data Governance strongly preferred • Experience deploying Data Quality Framework and Solutions required • Experience with Informatica PowerCenter • Strong RDBMS SQL and troubleshooting skills • Significant experience delivering and managing solutions around data integration • Familiarity with current trends in data quality technologies • 5+ years of experience implementing complex queries against large datasets to support business intelligence functions • 5+ years of experience with ETL, application and database performance tuning and debugging • 3+ years of minimum experience using standard ETL tools (Informatica, SAP Business Objects Data Services preferred) • Understanding of Dimensional Modeling and Data Warehouse concepts, such as star schema, snowflakes, dimensions, facts, etc • Experience following Agile development methodologies • Experience following release management and quality assurance processes • Very strong customer service orientation Informatica Developer Job Description 4.5 194 votes for Informatica Developer Informatica developer provides hands on guidance to other team members with extraordinary skills in developing ETL mappings and scripts using Informatica PowerCenter 10.1 / 10.2 and PowerMart 5.1 using Designer (Source Analyzer, Warehouse designer, Mapping designer, Mapplet Designer, Transformation Developer), Repository Manager, Workflow Manager & Workflow Monitor. To write an effective informatica developer job description, begin by listing detailed duties, responsibilities and expectations. We have included informatica developer job description templates that you can modify and use. Sample responsibilities for this position include: Design analytical SQL (Window Functions) Design and construct databases in both Netezza SQL Server Deploying code from one environment to another Designing & Develop Informatica MDM User Exits, Match rules Share knowledge and expertise with team Consulting & Communication Provide senior level consulting and advisory services to clients as subject matter expert for Informatica Power Center ETL and team delivery Provide analysis and recommendations for ETL implementation Take part in Design Brainstorm & design approval process Generate estimates for ODS & Warehouse ETL activities Informatica Developer Qualifications Qualifications for a job description may include education, certification, and experience. List any licenses or certifications required by the position: IDQ, SSL, SSH, TCP/IP, MDM, BODS, SAP, ITIL, PMP, PIM Typically a job would require a certain level of education. Employers hiring for the informatica developer job most commonly would prefer for their future employee to have a relevant degree such as Bachelor's and Master's Degree in Computer Science, Engineering, Education, Technical, Information Technology, Business, Information Systems, Math, Technology, Management Desired skills for informatica developer include: Data warehousing concepts Application design principles Areas on Informatica Designer Components -Source Analyzer Mapping Designer & Mapplet Designer Oracle DDL / DML and performance tuning strategies Systems development and analysis Desired experience for informatica developer includes: Create technical design recommendations for developing and integrating programs per written business / functional specifications Bachelors in Technology or in a related field required Relational Database concept knowledge (SQL Server preferred) Experience in working with relational databases such as Oracle 11g or higher, DB2 with the flat files and XML using the Informatica XML Parser Experience in resolving maintenance issues and bug fixes, monitoring Informatica sessions performance tuning of mappings and sessions Experience with other Informatica Component Modules including PowerExchange, IDQ Informatica Developer Examples Our company is growing rapidly and is hiring for an informatica developer. If you are looking for an exciting place to work, please take a look at the list of qualifications below. Responsibilities for informatica developer Interact with Oracle SupportLead Root Cause analysis and document resolutionPlan and conduct ETL unit and development testsYou will work closely with Business Systems Analysts, Offshore Developers, and vendor support teams to deliver projects and solutions that support a broad array of business needs in a divisionally consistent modelYou will be developing Data Integration solutions for Informatica (functionality will include ETL, and may include CDC, TDM)Will work with regional teams (Charlotte/New York/New Jersey India) This will mean attending meetings during timings enabling the global teams to meetConduct facilitated discussions with program customers to review current & gather additional business requirementsReviews specifications, materials, tools, techniques & methodologiesDevelops strategies for data ingress/egress implementation, including evaluating new data types (HL7, 837, etc...) for ease of integration or egress while adhering to the organization's quality standardsProvide consultation on complex projects Qualifications for informatica developer Minimum of 3+ years experience with Oracle, experience writing stored procedures, triggers, queriesPega PRPC 6.2 or higher platform experience for at least 3 years (at least 3+ years for Junior and 8+ years of experience in Pega for SeniorPega PRPC 6.2 to 7.1 Migration experienceHTML5, JavaScript, JavaScrum development methodology experienceExperience working with developers in global team Our company is growing rapidly and is searching for experienced candidates for the position of informatica developer. We appreciate you taking the time to review the list of qualifications and to apply for the position. If you don't fill all of the qualifications, you may still be considered depending on your level of experience. Responsibilities for informatica developer Supports large and critical software applications for the clientViewed as a technical expert or advisor for BI applicationsParticipates on (and may lead) projects where analysis of systems or data requires an in-depth evaluation of complex business process, system process, and industry standardsExperience with database design, querying, stored procedures, views, joins, performance tuningUnderstand Client Business Objectives and performing technical analysis responding to the needsDevelop, document and test ETL interfacesAssist project teams in defining data integration needsPerforms code and design reviewEvaluate, Design, and leverage Informatica solutions to enhance data security, provide a DAAS architecture, and maintain an MDM frameworkWork with users and business SMEs to define technical specifications to develop data modeling requirements, code design and functional and technical documentation Qualifications for informatica developer Web services, Rest API experienceFollow best practices in PEGA architecture / design / codingConfiguration and development of the Pega rule componentsExperience working with team members in remote locations (US/India)Must have strong experience with Agile processKnowledge of integration with ECM or SharePoint Our company is growing rapidly and is looking to fill the role of informatica developer. Please review the list of responsibilities and qualifications. While this is our ideal list, we will consider candidates that do not necessarily have all of the qualifications, but have sufficient experience and talent. Responsibilities for informatica developer Promote and apply Informatica development best practicesDevelop Workflows, Sessions, Mappings in Informatica PowerCenter (Data Integrations)Develop Data Replication/Synchronization Tasks in Informatica Cloud (Cloud Application Integrations)Develop Mappings in Informatica Developer (Data Integrations & Data Quality)Post deployment support and defect resolutionsSupport automation processes (load schedule) and On-CallEvaluate all functional requirements and map documents and perform troubleshoot on all development processesCollaborate with application groups to prepare effective solutions for all programsDocuments all technical specifications and associate project deliverablesDesign all test cases to provide support to all systems and perform unit tests Qualifications for informatica developer Experience working with power Exchange, Informatica Admin activityUnderstand the existing ETL jobs and mappings, sessions and workflowsAbility to provide sporadic production support if any issues reportedTroubleshoot ETL jobs and fix the issues based the prioritiesAnalyze and understand the data at source and target system to fix the issues within the specified timelinesTune the Informatica mappings Our company is growing rapidly and is looking to fill the role of informatica developer. To join our growing team, please review the list of responsibilities and qualifications. Responsibilities for informatica developer Troubleshooting and remediating technical issues and production data setsManaging production of day-to-day operational aspects of programImplementing and maintaining the supporting operations processes and release managementManaging the day-to-day client interaction, setting and managing client expectationsReviewing deliverables prepared by team before passing to clientEnsuring project documents are complete, compliant, and stored appropriatelyRemediating technical issues and production data setsManaging production of day-to-day operations and client interactionImplementing and maintaining supporting operations processes and release managementThis individual will be responsible for solution design, integration, data sourcing and transformation, database design and development (logical / physical) and tool implementation related to data warehousing (responsibility level will be commensurate with the position level and will begin in a learning mode) Qualifications for informatica developer Provides expertise and guidance for existing ETL jobs to tune as and when required to improve the performanceDevelop and support Web solutions for our Finance applications fulfilling stringent performance requirementsA bachelor's degree in computer science or a related field with a specialization in relational database management systemsThis is a senior position that requires 5+ years of Informatica development experienceDemonstrate in-depth understanding of Data Warehousing (DWH) and ETL concepts, ETL loading strategy, ETL Error Handling, Error logging mechanism, standards and best practicesKnowledge of SQL window functions data visualization tools, and applications Our growing company is hiring for an informatica developer. To join our growing team, please review the list of responsibilities and qualifications. Responsibilities for informatica developer Develop & maintain new ETL applicationsEnsure system capacity, performance and 24x7 availabilityFollow company software development CMMI processes and standardsWork in a team environment following the full Software Development Life Cycle (SDLC)Keep up to date with new technology developments and implementationsOperational activity planningAssist with MDM strategy, Process Design, high level MDM architecture requirement and the implementation planAbility to develop MDM based web services using SIFCollaborate with various technical teams and business users for Development, QA, and Operations SupportParticipate in the analysis, design, development and testing on the new projects Qualifications for informatica developer Experienced ETL Lead with core expertise and hands on capability in Informatica4+ years of experience with UNIX scripting and utilities (e.g., PERL, Kornshell)Skills in database design with some data modeling skills, proficiency with ANSI SQL-99Informatica Power Centre 9.1Bachelor's Degree in Computer Science and/or Business or - Diploma in IT and/or Business with Equivalent IT Experience Must HaveINFORMATICA/SYSTEMS ANALYSIS Related Job Descriptions Experience in IDQ development around data profiling, cleansing, parsing, standardization, verification, matching and data quality exception monitoring and handling Designing, developing, testing, deploying, and documenting a project's data quality procedures and its outputs. Profile the project source data, define or confirm the definition of the metadata, cleanse and accurately check the project data, check for duplicate or redundant records, and provide information on how to proceed with backend ETL processes. Experiences with creating SQL procedures, views, subqueries, multiple SQL joins, unions to perform various data extraction tasks and developing PL/SQL triggers for updating or inserting new records Minimum 3-6 years of hands-on experience with Informatica Data Quality (IDQ) toolset (Version 10.x preferred) Working experience in Informatica PowerCenter Strong SQL skills with the ability to tune and optimize complex queries Experience in the flowing will be added advantage.
