Personal touch: Make conversations unique with features like custom chat bubbles or fun selfie GIFs. Privacy and security: Enjoy the best spam protection out there. Your chats with other Google Messages users are protected with end-to-end encryption. AI-powered messages: Craft the perfect message with Gemini and other intelligent features. Seamless across devices: Start a chat on your phone and continue it effortlessly on your tablet or computer. Tip: Availability of RCS varies by region and carrier. Explore the fun features in Google Messages Selfie GIFs To add a fun and creative twist to your conversations, you can create and send short, personalized GIFs directly from your Google Messages chats. Voice messaging with Voice Moods Bring your voice messaging to life with Voice Moods. With 9 different emotions to choose from, your voice can sprinkle heart-eye emoji, fume with fireballs, and break out the party popper. The recipient can hear your words along with a visual effect that expresses how you feel at that moment. Thanks to user feedback, we increased the bitrate and sample rate to improve the overall audio quality of voice messages. Screen Effects With Screen Effects, your messages come alive with vibrant animations that transform your words into visual displays that dazzle. Simply type specific messages like "It's snowing" or "I love you" and watch your screen erupt in a symphony of colors and motion. Together, with your friends, try to uncover 15 or more hidden Screen Effects prompt words. Custom Bubbles With new Custom Bubbles, you can customize the bubble color and backgrounds of your conversation and the person you communicate with. If you like, pick a different color for every chat. It's no longer about blue or green. Now, you can differentiate your conversations and avoid accidental text in your family group chat about a weekend update meant for your friend. Reaction Effects Reaction Effects is an addition to your messaging experience that injects more life into your conversations. Picture this: Your friend texts you to let you know the 2 of you have reservations in that trendy new restaurant that everyone has been buzzing about. If you react to the message with a simple Thumbs up emoji, magic instantly unfolds as an animated trio of hands dances around the message bubble. The feature, designed to add a dynamic twist to your chats, embraces the power of expression with 10 of these popular emoji . Profile Easily change your profile name and picture that accompanies your phone number. Your self-expression is important so you can now change how you appear across Google. This helps people recognize you, particularly in group chats. Powered by AI features To draft messages, brainstorm ideas, plan events, or simply have a fun conversation, in the Google Messages app, you can chat with Gemini. To get suggestions to start or reply to a conversation or to rewrite a drafted message in different styles, use Magic Compose. Transform your favorite photos into reactions with the help of on-device Google AI with Photomoji. Post to the help community Get answers from community members Avec Google Messages pour le Web, vous pouvez discuter avec vos amis depuis votre ordinateur ou votre tablette Android. Vous avez accès à tous les contenus de votre application mobile Google Messages. Lorsque vous envoyez des SMS avec Google Messages pour le Web, une connexion est établie entre votre ordinateur et votre téléphone. Par conséquent, des frais sont facturés par votre opérateur, comme si vous utilisez l'application mobile. Important : Votre compte Google est utilisé pour : associer l'application mobile à votre appareil. Vous pouvez associer votre compte Google Messages à plusieurs appareils, mais en ce qui concerne les ordinateurs, un seul peut être actif à la fois. Si vous choisissez d'utiliser le code QR au lieu d'un compte Google, notez que le code QR est propre à votre ordinateur ou à votre tablette. Astuce : Si vous utilisez votre téléphone, les données consommées peuvent vous être facturées. Connectez votre téléphone au Wi-Fi pour ne pas avoir à payer de frais supplémentaires. Sur votre téléphone, ouvrez Google Messages . En haut à droite, appuyez sur le menu de votre compte Associer un appareil. Si vous êtes invité à vous connecter avec votre compte Google, sélectionnez le compte que vous souhaitez utiliser avec Google Messages, puis continuez. Sur votre ordinateur, dans un navigateur tel que Chrome ou Safari, ouvrez Google Messages pour le Web. Connectez-vous à Google Messages pour le Web avec le compte Google que vous avez choisi sur votre téléphone. Sur votre téléphone, une boîte de dialogue contenant trois emoji s'affiche dans l'application Google Messages. Appuyez sur l'emoji correspondant à celui affiché sur l'écran de votre ordinateur. Votre téléphone vibre lorsque l'association est terminée et vos messages s'affichent sur l'écran de votre ordinateur. Si vous n'avez pas de compte Google, recherchez l'option qui vous permet d'associer votre appareil en scannant un code QR. Important : Vos derniers fils de discussion, vos contacts et vos paramètres seront chiffrés et mis en cache dans votre navigateur. Si vous n'utilisez pas votre compte Google Messages pendant quelques semaines, il sera automatiquement dissocié pour des raisons de sécurité. Si vous avez des messages non lus, leur nombre et une notification en rouge apparaissent avec l'icône Google Messages dans l'onglet de votre navigateur. Conseil : Vous pouvez assombrir le fond d'écran de l'application Google Messages pour le Web ou choisir un contraste élevé. Sur votre ordinateur, cliquez sur Plus Activer le thème sombre. En dissociant vos appareils, vous évitez que d'autres personnes lisent vos messages et accèdent à vos informations sensibles (codes de validation de l'authentification à deux facteurs ou données personnelles, par exemple). Si vous utilisez l'application Google Messages pour le Web sur un ordinateur public ou partagé, n'oubliez pas de le dissocier lorsque vous avez terminé. Sur votre téléphone, ouvrez Google Messages . En haut à droite, appuyez sur le menu de votre compte Associer un appareil. Choisissez la procédure de dissociation adaptée : Dissocier un ordinateur : à côté de l'ordinateur que vous souhaitez dissocier, appuyez sur Supprimer Dissocier. Dissocier tous les ordinateurs : appuyez sur Dissocier tous les ordinateurs. Avec Google Messages, vous pouvez consulter vos messages sur votre tablette Android. Si l'application n'est pas installée sur votre tablette, vous pouvez la télécharger sur Google Play. Important : Lorsque vous utilisez Google Messages sur votre tablette, des frais sont facturés par votre opérateur. Remarques : Pour ouvrir Google Messages sur votre tablette, suivez la même procédure que celle décrite ci-dessus dans la section "Configurer Google Messages pour le Web". Si vous décidez de ne pas effectuer l'association avec votre compte Google, le code QR unique de Google Messages associe l'application mobile à votre tablette. Certaines tablettes dotées d'une connexion au réseau mobile et d'une carte SIM peuvent envoyer des messages à votre téléphone, sans connexion. Votre tablette fonctionne ainsi comme un téléphone mobile. Comment pouvons-nous l'améliorer ? What are RCS chats? Rich Communication Services (RCS) chats provide an upgraded, rich messaging experience. RCS chats: Show you when someone is typing. Offer read receipts, which show when someone has read or received your message. Read receipts also show your contact when you read their message. Send messages over mobile data and Wi-Fi. Let you share files and high-resolution photos. When you use RCS chats, your messages are sent with the Rich Communication Services (RCS) protocol over Wi-Fi and mobile data. RCS chats will be turned on only when all the participants in a conversation have RCS. RCS chats are provided by Google or your mobile carrier. What devices work with RCS chats? Rich Communication Services (RCS) are available on Android devices and other devices where RCS is turned on in settings. Check your carrier and device settings. Availability of RCS varies by region and carrier. What happens if I don't have data, or the recipient isn't online? Google Messages can still be sent as SMS or MMS. You can check and set your default option when RCS isn't available: Open Google Messages . At the top right, tap your profile photo or icon Messages settings RCS chats. Turn Automatically resend as text (SMS/MMS) on or off. What if RCS chats aren't available for my device? To check your RCS availability and status: Tap on your profile photo or icon Messages settings RCS chats. Tip: If you can't find "RCS chats," tap Chat features. To troubleshoot your RCS chats connection: Update Google Messages and your Carrier Services from Play Store. Make sure Google Messages is set as your default SMS app. If your device has dual SIM slots, and both SIMs are inserted, make sure your Call SIM is configured as your Data SIM: On your Android device, open your Settings. Tap Network & Internet. Make sure your Call SIM is configured as Data. What if my RCS chats status shows that my carrier doesn't support, or I'm ineligible to receive RCS? We're working to bring RCS support to more countries/regions and carriers. My RCS chats status says "Setting up." How do I get RCS chats? When we're in the process of verifying your phone number, your RCS chats status displays "Setting up." If the "Setting up" status remains for more than a day, it means Google Messages can't verify your phone number. To verify your phone number: Go to your profile photo or icon Messages settings RCS chats. Tap REIFY and confirm your phone number when requested. Tip: If you can't find "RCS chats," tap Chat features. Google will send an SMS to confirm your phone number. Make sure you can receive SMS messages. How do I know if my message was sent? Google Messages tells you when your message has been sent, received, and read through the icons next to your message. Important: These icons won't show on SMS or MMS messages. Timer : Your message is being sent. Single check : Your message has been sent. Double check : Your message has been read. I don't currently use Google Messages, what happens if I switch my default app to use Google Messages and start to use RCS chats? You can make Google Messages your default app as described here. You won't lose any existing SMS/MMS messages if you change your default app to Google Messages and you'll be able to use Google Messages' benefits such as Google Messages for Web, Smart Replies, and RCS chats (where supported). If your previous messaging app supports proprietary features or non-interoperable forms of messaging (not SMS, MMS or interoperable RCS), you won't be able to use those features after you switch. Will features like typing indicators and read receipts work when the recipient doesn't have RCS chats? No, but standard text messaging via SMS/MMS will still work. Information we use To make sure your messages are properly delivered, Google uses information like your phone number, device identifiers, and SIM card number. This data may be stored for about a month to keep you connected to RCS and in cases where you temporarily go offline. When you turn on RCS chats, and each time you send a message, Google checks your contacts to find out if they can also use RCS chats. These checks may go through Google's RCS infrastructure and other service providers to reach your contacts. What is the group chat experience when I include people who don't have RCS chats? If all the participants don't have RCS chats turned on, you still may be able to create SMS/MMS groups. Know if additional cost apply in RCS chats When you use RCS chats, your messages are sent over Wi-Fi and mobile data. As long as you're connected to a Wi-Fi network that you don't have to pay to use, there's no additional cost to send and receive messages. If your messages are sent using mobile data, the cost is based on your mobile data plan. You can now use Rich Communication Service (RCS) chats between Android and iPhones. When you chat with an iPhone user friend, you can: See typing indicators in 1:1 conversations Read receipts in 1:1 conversations Manage group chats Send high-resolution photos and videos Turn on RCS on an Android or iOS device Turn on RCS chats on Android devices Learn how to turn on RCS chats in Google Messages Turn on RCS chats on iOS devices Please contact your carrier for instructions on how to enable RCS for iPhone. FAQs about RCS messaging between Android and iOS Country or region availability for RCS on iOS devices RCS chats may not be available to iPhone users depending on users' country and carrier. For more information about whether you can use RCS on your iPhone, contact your carrier. Android texts appear as a green bubble when texting with iPhone users Apple displays text messages that don't come from an iPhone user as green bubbles. This is also true for messages from other iPhone users who have iMessage disabled. RCS chats with iPhone users don't have end-to-end encryption Google Messages offers end-to-end encryption for your RCS messages with other Google Messages users. The GSM Association (GSMA) sets Mobile and RCS standards and we are currently working to define security standards cross platform.
