## stationweather pro aviation weather for pilots

Aviation applications can be very useful for both pilots (commercial or private) and students. They can help you check detailed weather messages, flight status and much more from your Android device. There are also many applications that can be very useful in planning. So, if you're looking for aviation apps to improve your flights, the 10 best weather apps for your Android device: 1. Planes next to you. For proper operation of this application, an external radio circuit Realtek 2832U DVB-T to the USB port is required. Air movement overlaps on OpenStreets cards with a spherical overlay. 2. Myradar Weather Radar. Myradar Weather Radar is an app that shows animated weather at your location. This allows you to quickly check how the weather is. The application uses raw data from NWS to NWS. The radar in the application has a relatively high resolution, and you can increase the scale as you wish, and at the same time you can clearly see the approaching weather. The app also has several layers on the card that you can use and get more information. There are several layers on the map, including a sigmet and an aviation layer that shows the weather, so you can keep a step before or during the flight. It also shows TFR on the map. Another layer that can be useful is the "cloud" layer, which blocks the location of the clouds on the map. The app is free and you can delete your ad using in-app purchase. It also supports Apple Watch, so you can get the most important information right on your wrist. Download Myradar for Android and iOS™ (free, with app exchange) 3. Fltplan Go Fltplan Go is actually a companion app to FLTPlan and presents the most important and useful website on your iPad, Android or Android or Android Planet. The app comes with powerful routing and cartography features that you can also use in autonomous mode. The application contains many useful features such as airport and FBO information. Apps for private passengers can also show fuel prices along the route, so you can stop at places comfortably. Movement cards (supplied with chapters), diagrams, navigation journals and weather forecast will be provided. Aeronautical applications can be very useful for pilots (commercial or private) and students. They can help you manage detailed reports on weather, aviation status, and more right from your Android device's display. There are also many applications that can be very useful on the fly. So, if you are looking for aviation apps which will improve your flight a lot, here are the top 10 airplane apps for your Android device: 1. ADS-B Driver Air Traffic Map displays aircraft position and decoding ADS-B Message sent by aircraft. The closest user. For the proper functioning of this application, the REALTEK 2832U DVB-T radio receiver is required. The key of the key connected to the USB port. Air movement is overlaid on the OpenStreetMaps map with a global overlay. 2. Myradar Weather Radar, as the name derives: Myradar Weather Radar is an app that shows an animated weather of your location. This will allow you to quickly check what time is approaching. The app uses unprocessed NOAA weather data from NWS. The radar in the application has a fairly high resolution, and you can increase the scale as much as you want, and at the same time clearly see the approaching weather. The app also has a number of levels that can be imposed on the map to receive additional information. There are several levels including the aviation level which shows the sigma and the airport on the map so you can be aware before or during the flight. See also TFR on the map. Another layer that can be useful is a cloud layer that coincides with the location of the clouds on the map. The app is free and you can remove advertising using an in-app purchase. It also supports Apple Watch, so you can get the most important information right from your wrist. Download Myradar for Android and iOS™ (free, with appendix purchases) 3. Fltplan Go Fltplan Go is actually a companion app to the Fltplan website and provides the website's most important and useful tools on your iPad or your android tablet for android tablet for your ipad unauthorized use of the android tablet. The application comes with powerful paths and comparison functions that you can use on the fly or even in standalone mode. The application contains many useful functions, such as airport and FBO information. For private passengers, the app can also display fuel prices along the way so you can stop at places more convenient for you. Movement maps are suitable (provided in sections), diagrams, navigation and time of flight. Be useful during the flight. If you are using FLTPLAN, it is very useful for you to automatically match the application with a website that will always be up and equal. The application also comes with a connection management for Dynon and Avidyne Play, as well as Pathfinder, Dual XGPS-170 and XGPS-190 and much more. It also has two built-in simulators: X-Plane simulator and GPS FSX & Prepep3D, which you can really find well. Download FLTPLAN in Android and iOS (free). 4. Garmin pilot Another application that should be on your iPad or Android tablet during the flight is the Garmin pilot. Garmin Pilot is one of the most complete tools for private and commercial drivers. Therefore, if you are looking for a tool that can be used as a flying tool. Garmin pilot is probably suitable for this purpose. The application divides the entire process of piloting aircraft into four categories such as a plan, file, fire and platform newspaper and offers functions for each of these categories, so they claim to be the most complete tools for flying. In the planning phase, the pilot application provides the ability to achieve the results of full air weather to make a more conscious flight decision. During the flight. In Dossy and Flight steps, the application offers the opportunity to create flight plans within the application and change them directly on the interactive map found in the application. It makes it easier to fill in prepaid forms in the application. And the application provides the application. Flight navigation. The application also comes from a flight with electronic day starting automatically using GPS data. The application is listed with a 30 -day free trial version, then you have to buy a subscription containing the purchased purchases by the required auxiliary program. The app is available on iOS and Android platforms. Although they have to work with iPhones and iPods, the fact that the application works on the iPad and it is best to continue. Download the Garmin pilot in Android and iOS (30 -day trial versions, subscriptions start at \$ 9.99) Track flight status and all commercial flights worldwide. However, only the United States and Canada can display private and charter flights in Canada. There are many ways to track flights using the application, such as flight number, flight destination number, departure and arrival airports. The app just does something and does it well. With flight containers you can easily find and track all flights in the world. The application is free to use for iOS and Android devices. Download Flightware for Android and iOS. However, the application provides data for most countries in the world, such as TPC maps and ONC maps for Canada, South Asia and some other countries. The app provides airport schematics and terminal procedures, as well as offline maps on all FAA maps. The app also includes GPS status, terrain and elevation maps, obstacles and more. In connection with the Internet, the application can also download Metar and TAF, TFR and many other useful information. Download AVARE for Android (Free) 7. Navigator Navigator is primarily an android application that is primarily a mobile GPS map for pilots. The app's GPS map displays information such as airports, TFRs and other details that might be useful to a pilot. Perhaps the best feature of the app is that it downloads all navigation data to your Android device, so you don't need a data connection to get the right GPS data. The app also includes features such as a vertical navigation computer, and the Navigator can control the aircraft's autopilot via NMEA output. The application can be used for a 30-day free trial, after which you must subscribe to the service. Download Navigator for Android (30-day free trial, subscription starts at \$4.99) 8. ForeFlight ForeFlight is an iOS application that offers many great features, including much more. With ForeFlight's graphical briefing, you'll receive up-to-date pre-flight information so you can prepare. You can also use the application to archive, change or cancel visual flight rules (VFR) directly from your mobile device. Like almost all other applications, you can also see Sigmet, Aermers and TFR on your iPhone or iPad. And with the Apple Watch support provided by the app, you can have all this information in an instant on the wrist. Foreflight is also equipped with many other features such as the Risk Advisor, the synthetic vision, the taxi maps and others that will certainly return useful during the flight. Download Forflight for iOS (free in-app purchases) 9. Flightradar Flightradar is a program that allows you to convert your iOS or Android into a flight track. The application can create all the commercial flights of the world in real time and you can easily trace any interesting flight. You can also just open your device against a plane in the sky to identify the app. With FlightTradar you can search for flights, see planes images and get calls on calls for any desired flight. If you want, you can also use the app to see what the pilot is seeing in real time and 3D. You can get complete information on the flight simply by touching the plane, making it easier to spend the flight time and more. However, these features are only available in the Aviation -Paid version, which you can get on your iPad for \$ 3.99. Download FlightTradar for Android and iOS (free and paid apps) 10. Fltplan Go App approach with geographical indications and airport cards (United States and Canada) - Weather included Metar, TAF, Pireps, Pireps and Mos. April 29, 2016. Tag: Aviantflight Foreflight alternatives (you have to log in or register to answer here.) News Forum> Controlled air flow> Next flight> Earth and planes all over the world spend for Foreflight Foreflight flights, Map, weather, airport information, documents management, flight recording, synthetic vision and others. Foreflight Mobile 14.9 (October): Flag of operational notes, multiple floors and more radar layers. Discover the novelties Forflight offers a wide range of VFR, IFR and special cards, including: ICAO cards, terminal cards, VFR Joy Lanes, Helicopter, Grand Canyon and more. Mandatory, no matter what and where you will fly. VFR and IFR charts from FAA, Nav Canada, Eurocontrol, as well as other sources to give you everything you need for any type of flight. Find actionable insights at any level of scale using this data-tunable data layer with built-in airport schematics. Get the whole picture with dozens of interactive map layers for weather, hazards, surface maps, fuel prices, and imported consumer content. Sid, a star, a descendant with a geographical binding and guiding scheme, will help you navigate in the air and on the ground. Dynamic Winds & Temperatures Watch global predictions of wind speed, direction and temperature at different heights and at different times using these amazing animated air layers. The "Winds (TEMPO) and Winds (Speed)" layers use colored heat charts spanning the world to show their main forecast values at the selected altitude and time of their choice. Each layer on the heatmap has a smooth particle animation showing wind direction and speed, which provides an intuitive representation of high weather conditions, taking into account the baseline forecast value of the layer (wind speed or temperature). Use a time slider to keep the wind forecast for over 24 hours and move the height slider to stop the wind ahead of the surface at 63,000 feet high. Both tiers are included in Foreflight performance subscription plans. Get the relaxing review and Air 3D, turn on the American layers or global icing and turbulence using the new Guttino 3D layer sector to view the weather forecast on your route. 3D-Video shows the weather forecast in the form of floating colors in the form of color, which uses the same color scale to reflect the severity of the forecast, like a mountain map and profile type. Use the right height to see air at different heights and click the RTE button at the top cursor to show air only at the same height as the path. Preliminary 3D views are included in Foreflight Plus. Get the efficiency and flow of the Internet through flights in collaboration with flights, translate the global flow of aircraft directly in the front lamp to analyze the airport, check the active flight, etc. The same as Flow Ads-B, with quick access to the height and number of the queue, as well as in many other information for a touch, most of the flow targets. Watch the video, watch the video and draw correctly. A card for easier and more comfortable writing notes. Click on the annotation button on the left side of the screen to enter the drawing mode. The annotations are displayed above each card or layer and you can easily return them, cancel them again and delete them, as well as change the ink and the brushes. The rich library of meteorological products and a unique graphic briefing will lead you to your destination faster, safer and perhaps a little dry. To find out more, from animated radar to the Air / Sigmet's graph and world winds at altitude, more than a dozen cards with more will show you exactly where the time is compared to your planned route. The head of the industry of the images collection of hundreds of detailed current conditions and products for weather images at hand. Graphic instructions The translated text and the graphics in color will help you understand and use educational information. Plan how to go from point to point B, previously a chore. Not anymore. The Foreflight mobile is designed to increase the speed and efficiency of your planning, information and documentation workflow. Foreflight gives you flexibility when using graphic touch planning in card views or a full -based planner in the years. Do not forget to add feeding information to the plane profile to improve fuel consumption and suitable flight time. Store the days in advance, edit plans, activate and close the VFR flight plans and obtain immediate, complex and recorded weather information. Slot. Let it go. Fly. It's so simple. The front-fire mobile tactile planning function gives you control of the place to go and how to get there. Everything with a touch. Get the request notification when the conditions on your flight route are changed between the time of sending the request and the departure time. Select and visualize standard starts by devices (SID), standard arrivals to terminal recordings (star) and even traffic models. Easily add any procedure to your route by clicking. Where is the best rear wind? The height advisor knows it. Look at wind resistance, recalculated management and global time and fuel consumption at each height. Visual overview of automatically calculated route options that have recently been assigned or approved by ATC, an official preferred routes between airports and terminal routes for the management of routes. Send your IFR or VFR flight plan in a few seconds from the application or on the web. Our double connection of AFTN on two continents ensures the reliability of the transmission of the flight plans sent. Additional information The international conviviality of filling IFR flight plans is supported in the United States and within Canada, Mexico, Caribbean, Australia and all Eurocontrol member states. There is no creep. The advisor in danger highlights dangerous terrain and nearby obstacles. The display is constantly updated depending on the height and the GPS position. Foreflight's synthetic vision is the most used mobile synthetic visibility system. Fast, elegant and precise, with features such as night mode and light terrain. With the Foreflight Control List with the Foreflight Control List, run the control list and reduce the cabin. Breakdown workflow and offer more precise time and fuel calculations. Find out more with Foreflight, it's easy to update the latest graphics and plates. Simply select the types of data you want, the areas you want and press "Download". When the FAA or not Canada publishes new data, the application will inform you and allow you to update only with a key. It is possible to download graphs and data, even when the application works in the background, which allows you to use other iPad or iPhone applications without interrupting the download. Automatically update your graphs and data. The download of the database and the documents will start as soon as they are available and the device will connect to Wi-Fi. Forflight provides navigation data that cover the whole world. The statements concern data on airports all over the world, navigation, airspace, aerial routes, SID/Steis and enlargement procedures. Are you going to a long country? The package allows you to have the necessary maps, nomenclature, weather conditions, fuel prices and airport information. Forflight is the perfect gift for each pilot. They can collect information on time and target places, plan routes, approach and manage electronic maps, modify the flight channels, record flight times, move the map and not only - all in an elegantly designed application that synchronizes with the website on a mobile device. A constant flow of product development means that the peak is a gift throughout the year. Certificates are available in \$ 300, 200 and \$ 100 denominations. Get a gift voucher that we are here to help you. Each member of the support team is a pilot and expert Forflight. Get help to browse the base of History Edition Forflight Mobile
